## Strong demand for biodiesel from Germany

German biodiesel exports amounted to around 1.54 million tonnes in 2016. This translates to a 3.4 per cent rise year-on-year. Nevertheless, exports fell short of the 2014 record. EU member states continue to be the key recipients, absorbing around 87 per cent of German exports. The top recipients, the Netherlands and Poland, ordered significantly more biodiesel than a year earlier. French imports from Germany dropped 53 per cent, whereas Spain and Finland in particular purchased much more than 2015.
