Airbus: co-operation with Emerging Fuel Technology Inc.

has signed a Memorandum of Understanding (MOU) with Emerging Fuels Technology, Inc.(EFT) to promote EFT in the commercialization of technologies to produce sustainable fuels for aviation. EFT's proprietary Advanced Fixed Bed Fischer-Tropsch reactor and catalyst system can convert synthesis gas into transportation fuels such as renewable diesel and sustainable jet fuel.

Airbus Group is a driving force in a global effort to establish a sustainable fuel supply roadmap through an ambitious program connecting farmers, refiners and airlines to form regional sustainable aviation fuel value chains. This effort seeks to establish local value chains on every continent to support airlines' ability to refuel aircraft throughout the region. Programs have been established in Australia, Brazil, China, the Middle East, Romania and Spain.
